Indoor WPC Wall Panels

Coating Surface Explanation

The differences between standard surface and coating surface

Standard surface

It is mainly composed of wood fiber, high polymer material and environmentally-friendly color developing agent. It can be used directly without painting on the surface.

The colors are mainly divided into light and dark color series, looking plain and natural, which are like the color of the original wood.
It is elegant and graceful with a minimalist style, creating an extraordinary sense of high-class.

Standard surface

Coating surface

Covered by PVC protective film with a special treatment on the standard surface: not easy to fade, easy to clean, strong scratch resistance, rich patterns, various styles, meeting the personalized needs of clients.

The capped surface series included more than 100 types of well-designed surface textures, which COOWIN designers work out together through investigating the aesthetic differences between different countries and regions and combining the current trend of the world indoor decoration aesthetics.

Coating surface

COOWIN supports surface customization service, you can contact COOWIN if you have preferred texture and patterns. COOWIN will give better guidance and suggestions, we will try our best to provide the unique textured surfaces for you.
